

Worksheet: Periodic Trends

Key

1. List the following in order of increasing atomic radii:

- | | |
|---------------|-------------------|
| a. K, Na, Rb | <u>Na, K, Rb</u> |
| b. Be, F, N | <u>F, N, Be</u> |
| c. N, S, Br | <u>N, S, Br</u> |
| d. Xe, Ne, Kr | <u>Ne, Kr, Xe</u> |

2. List the following in order of increasing ionization energy:

- | | |
|---------------|-------------------|
| a. Ra, Sr, Ba | <u>Ra, Ba, Sr</u> |
| b. Bi, P, Sb | <u>Bi, Sb, P</u> |
| c. F, B, N | <u>B, N, F</u> |
| d. Si, Ar, S | <u>Si, S, Ar</u> |

3. List the following in order of increasing electronegativity:

- | | |
|---------------|-------------------|
| a. Mg, Ra, Be | <u>Ra, Mg, Be</u> |
| b. I, F, Cl | <u>I, Cl, F</u> |
| c. O, Li, C | <u>Li, C, O</u> |
| d. Fr, S, Sr | <u>Fr, Sr, S</u> |

4. Explain why the noble gases do not have electronegativity values.

Already have full octet, do not attract any more electrons.
